

With the introduction of VoIP and Unified Communications, service providers are replacing analog phone networks with better and more cost effective digital networks.

A cost effective way is using JDC refurbished phones and switches. Smart providers purchase the equipment and sell yearly contracts of Unified Communications as a Service (UCaaS). These providers take advantage of JDC's Leasing referral service so they can stretch out the equipment cost over the term of the contract reducing risk and providing monthly profits instead of waiting out a long Return On Investment. (ROI).

Refurberd Phones from JDC - Looks like NEW

- Grade "A" Refurberd phones have new handset & cords
